Carbon labelling

We use carbon labels by Foodsteps to help our guests understand the impact of their food choices. Foodsteps measure the impact of all stages of a food's life cycle and allocate a carbon budget measured in kilograms of carbon dioxide equivalent per kilo (kg CO₂e/kg) or more simply, carbon intensity. It includes an A-E carbon rating, where A is very low and E is very high.

Foodsteps uses life cycle assessment data to calculate the greenhouse gas emissions from food across its life. This is done for every dish on our menu, individually. The assessment takes into account the impact of emissions sources from all life cycle stages of the process of producing and consuming food: farm, processing, packaging, transport, retail, end-mile, cooking and food waste.

We hope labelling system will help raise awareness of how food production and meal choices affect climate change, and encourage those booking events with us to think about sustainability when choosing their menus.

Food sustainability

Our catering partners, Restaurant Associates, have the highest Food Made Good accreditation by the [Sustainable Restaurant Association](#), which covers sourcing, society and environment. They are also committed to Net Zero by 2030.

Restaurant Associates, collaborate with local suppliers and vendors who share our commitment to sustainability, prioritising the use of organic, fair trade, and environmentally-friendly products.

[Find out more about our sustainability pledges, climate promise, and local suppliers.](#)

Wine – sustainable practices

Our food and drink partner, Restaurant Associates, has worked hard to find excellent wineries that think seriously about sustainable viticulture. We have recently welcomed local English sparkling wine supplier, [Saffron Grange](#), to our menu.

[Find out what each producer on our wine list is doing to reduce their impact on the environment, or even enriching the biodiversity of their vineyards.](#)

Food waste

We have implemented systems and policies to avoid and reduce organic waste. We have identified where our food and organic waste is being generated and have set targets for its reduction. Food waste is weighed and then goes for anaerobic digestion.

Our talented gardening team converts frying oil from both Hinxton Hall and the other catering facilities on Campus to biodiesel, onsite. This then powers vehicles on Campus, including lawnmowers. The gardening team also collect coffee grounds from the Hall kitchen and sometimes use them on the soil as a conditioner, or to deter pests.

We also donate surplus food via Olio, the local sharing app. Food is collected from Hinxton Hall twice a week by volunteers trained in food safety and redistributed in the local community via the app, helping us reduce food waste in a meaningful way.
